

Assemblin

New ventilation assignment for Assemblin at Stockholm's Sturekvarteret quarter

Assemblin Ventilation has signed a contract with Peab regarding the installation of ventilation systems as part of the comprehensive renovation and remodelling of parts of the Sturekvarteret quarter in central Stockholm. The project is ambitious in terms of sustainability and is scheduled for completion in 2027.

In connection with the renovation and remodelling of the south part of the Sperlingens Backe block at Stureplan, Peab has signed an agreement with Assemblin Ventilation. The project encompasses a total of about 48,000 m² of the Sturekvarteret quarter and includes the renovation and restoration of older buildings, new offices, homes and additional public spaces, as well as a new connection to the Östermalmstorg metro station. The entire project shall meet the highest sustainability certification in accordance with LEED Platinum, Wired score Platinum and Well Gold.

Assemblin's assignment includes designing and installing new, modern and energy-efficient ventilation solutions. The assignment takes the form of a design-bid-build contract.

"This is an exciting project in a unique environment. We are very proud of this assignment and look forward to contributing to a sustainable and energy-efficient project in close partnership with our client and others involved in the project," says Håkan Ekvall, EVP and Business Area Manager, Assemblin Ventilation.

Work has commenced and is scheduled for completion in 2027.

"This is an entirely unique project with an extensively sustainable approach, in which Peab, alongside selected partners, can contribute a great deal," says Stefan Danielsson, Business Area Manager, Construction at Peab.
