Assemblin signs new contracts for multi-technical installation projects at an industry facility with total order value of approximately SEK 135 million

Assemblin has signed multi-technical installation contracts for two new projects at a manufacturing facility south of Stockholm. The assignments have a combined order value of approximately SEK 120 million and reinforce Assemblin's position as a strong installation partner in advanced industrial projects.

One contract covers multi-technical installations in a new 10,000 sqm industrial and logistics facility, with **Skanska** as the client. The project includes installation work in ventilation, heating and sanitation, electrical systems and advanced cooling technology. This project has started and is expected to be completed at the end of 2028.

The second assignment covers installation work in ventilation, heating and sanitation, electrical systems, sprinklers and control systems in a project with **Hygienbygg** as the client. This project has started and runs until the end of 2027.

Both assignments involve work in technically advanced industrial environments with high requirements for quality, safety, planning and coordination.

“We are very proud of these assignments. Working in advanced industrial environments requires experience, technical expertise and an organisation that can manage and coordinate complex projects. For us, it is particularly rewarding to work together across our technical disciplines and branches, which strengthens our delivery capability,” says **Andreas Aristiadis**, CEO Assemblin H&S, EVP.

Assemblin sees great potential in the industrial sector, and with the new assignments Assemblin strengthens its position as an installation partner for larger industrial projects.

“We have spent a long time building a strong organisation with experience of large and technically demanding industrial projects. In all industrial assignments, a focus on safety and the working environment is particularly important, and it is a high priority at Assemblin. We now look forward to working together with our clients to deliver energy-efficient and reliable installation work in an efficient and safe manner,” says **Håkan Ekvall**, CEO Assemblin Ventilation, EVP.
